

Sonu Kumar

Engineering Graduate Intern — Java Backend Developer — Data Pipelines & Enterprise Web Systems

📞 7294085931 ✉️ gautamrocky909621@gmail.com 🌐 github.com/cws31 🔗 linkedin.com/in/sonu-kumar

Technical Skills

Programming Fundamentals: Java (Core & Advanced), Python (Basic), SQL, Data Structures & Algorithms (DSA), OOP
Data Engineering & Backend: Spring Boot, Spring Framework, RESTful APIs, Microservices Architecture, Relational Databases
Databases & Data Management: MySQL, PostgreSQL, Relational Database Design, Data Processing, Metadata Validation
Enterprise Tools & Security: Hibernate, JPA, Maven, JWT Authentication, Role-Based Access Control (RBAC), Postman
Testing & Operations: JUnit 5, Mockito, Git, GitHub, Swagger/OpenAPI, API Routing, Error Payloads
Methodologies & Competencies: Agile/Scrum Workflows, Enterprise Systems, Cross-Functional Collaboration, Troubleshooting

Projects & Data Engineering Exposure

Workout Tracker Enterprise API (Large-Scale Web App) | [GitHub](#) Mar – Apr 2026

- Developed **15+ scalable REST API endpoints** using **Java, Spring Boot, and MySQL** to handle secure multi-user backend operations.
- Built robust **data validation pipelines** using Spring Security and stateless JWT-based filters to safeguard enterprise resource layers.
- Maintained an iterative, Agile-driven lifecycle with Git/GitHub, delivering bug fixes and features over 10+ branch pull requests.
- Handled end-to-end backend troubleshooting, achieving **65%+ unit testing coverage** via **JUnit 5** and **Mockito** frameworks.
- Tech Stack:** Java, Spring Boot, Spring Security, JPA, Hibernate, MySQL, JUnit 5, Mockito, Swagger/OpenAPI, Git, Maven.

TaskSwap Data Delivery & Backend Service | [GitHub](#) Nov – Dec 2025

- Engineered a scalable Controller-Service-Repository architecture driven by **Java** to manage automated text-based transaction data.
- Streamlined data communication pipelines using **Spring WebSocket and STOMP**, dropping message latency to under 200 milliseconds.
- Designed a high-integrity normalized relational database model with foreign key constraints, securing absolute data consistency.
- Optimized database SQL query paths during intensive dataset scans, successfully driving down overall API response latency by **25%**.
- Tech Stack:** Java, Spring Boot, Spring Security, Hibernate ORM, JPA, PostgreSQL, REST APIs, Git, Maven.

Smart Habit Tracker System | [GitHub](#) Sep – Oct 2025

- Built an interactive enterprise-style system utilizing a **Java and React** framework, processing real-time dataset updates safely.
- Structured custom Java Data Structures to build accurate algorithms for tracking, processing, and calculating complex user datasets.
- Collaborated across isolated feature branches in Git, performing independent verification and testing routines prior to system release.
- Tech Stack:** Java, Spring Boot, React, Tailwind CSS, JavaScript, JWT, MySQL, Git, RESTful APIs.

Education

Vignan's Foundation For Science Technology and Research

Bachelor of Technology in Computer Science and Engineering (CGPA: 7.58)

Expected Aug 2027
Vadlamudi, Andhra Pradesh

Maharani Janki Kunwar (MJK) College

Higher Secondary / Intermediate Science (Percentage: 83.8)

Mar 2020 – Feb 2022
West Champaran, Bettiah, Bihar

Achievements, Problem Solving & Collaboration

- Secured **1st Place** out of 30+ cross-functional teams in the university-level VCode Hackathon, deploying an operational system.
- Awarded the **Consolation Prize** among 50+ participants in the collaborative HackStack Hackathon (ByteXL & Vignan University).
- Solved over **60 critical algorithmic challenges** on **LeetCode**, sharpening problem-solving speed and structural debugging logic.
- Earned official validation credentials in **Java (Basic)** and **Problem Solving (Basic)** through verified assessments on HackerRank.
